

RightPatient™ safeguards patient health by ensuring 100% identification accuracy.

RightPatient™ is a multi-modal biometric identification system designed to accurately and efficiently identify patients. It increases the quality of healthcare and helps prevent medical identity and healthcare fraud which is estimated to cost the industry between \$70 billion and \$255 billion per year.

M2SYS RightPatient™ Solution Key Benefits & Experience

- Supports iris, palm vein, finger vein and fingerprint biometrics.
- No code or database-level system integration, no EHR/EMR software vendor resources to implement or support.
- M2SYS has 10 years of experience in biometrics and tens of thousands of customers in over 90 countries.

LEARN MORE 

RightPatient™ Biometric Patient Identification System

Iris patient identification is fast, accurate and hygienic with the ability to search millions of records per second.

- The most accurate form of biometric recognition – the chance of two irides being identical is 10^{78}
- The iris pattern and structure exhibit long-term stability, formed at 10 months of age – solution works well with infants
- Extremely fast 1:N matching speeds with the ability to match millions of templates per second
- Eliminates duplicate medical records and prevents patient fraud at the point of enrollment
- Completely contactless and non-invasive – nothing to clean on a regular basis
- Iris biometrics has been tested and certified by independent organizations

Eliminate Patient Misidentification with RightPatient™ Biometric Identification from M2SYS Technology

RightPatient identifies patients using biometric technology to ensure 100% accuracy, safeguard patient health, eliminate medical identity fraud and reduce hospital liability.

Powered by the Hybrid Biometric Platform™ multi-modal biometrics system, RightPatient™ supports fingerprint, finger vein, palm vein and iris recognition and offers one to many matching capabilities, the only true way to eliminate patient identity fraud.

Why is RightPatient™ the best solution for patient identification?

Differentiators:

- Industry's first multi-biometric patient identification system.
- Instantly interfaces with any EHR or patient management software.
- No database or code-level integration with EHR software needed.
- Custom interfaces already developed for several popular EHR systems.
- Supports fingerprint, finger vein, palm vein, and iris recognition.
- System can be up and running in 24 hours.
- Healthcare biometrics module appears as seamless component of EHR software.
- Scalable one-to-many healthcare biometrics system; ability to match millions of biometric templates per second.
