Fingerprint Technology Used to Track Youth Service Attendance

Faith Assembly of God is a dynamic, contemporary, multi-cultural church located in Orlando, FL. During a typical Sunday service, over 3600 visitors and members attend. Three times a week, they host youth services and several hundred youth attend. Faith Assembly tracks attendance to these services through a client-server database application. To check-in, each student is required to provide their last name or a phone number.

CHALLENGE:

On any given night, teenagers by the hundreds were lining up to check-in for youth services at Faith Assembly Church of God. Faith Assembly was already using a management system to track attendance, so they considered installing a bar-code reader and issuing identification cards but were concerned about the cards being lost, misplaced, or forgotten altogether. They were also hoping to take measures that would reduce the waiting time, so they encouraged their software vendor to research and select an alternative solution that would offer an affordable identification system for their attendees and one that could be deployed rapidly.

SOLUTION:

Their vendor selected Bio-SnapON to work in tandem with their existing attendance tracking software.

BENEFITS:

By utilizing Bio-SnapON™ from M2SYS Technology, Faith Assembly has been able to significantly reduce wait times, streamline the check-in process, and better manage attendance tracking for their youth services. They are now planning to implement the system in other areas of the church to better improve attendance tracking and to assist them in allocating staff and resources.

"We asked our database vendor to look into adding a fingerprint component to our existing system, and I'm so glad we did! What has impressed us most is the speed. We added Bio-SnapON in no time, and now we use it to register 400-600 youth for services three times a week in a matter of minutes when it used to take much longer."
