

Australian Based Hobie Cat Deploys Standalone Biometric Time and Attendance System for More than 5,000 Employees

Challenge

Hobie Cat was looking for a way to track employee time and attendance from remote locations in order to ensure better workforce management and to establish accountability.

Due to not having a remote attendance monitoring system, there was a problem in calculating employee absenteeism, verifying working hours and overtime, and accurately calculating payroll. Due to the fact that many employees had to frequently punch in from different locations, Hobie Cat was unable to accurately track their attendance. They were desperately looking for a solution in order to remotely monitor workforce activities with a standalone device.

Solution

Hobie Cat was looking for a standalone biometric time and attendance solution which would address their problems and help them to more effectively manage their workforce. We advised them to implement a fingerprint time and attendance system with our **Timeshield™** solution. TimeShield™ is an innovative Biometric fingerprint terminal used for employee time and attendance data capture. It offers unparalleled performance by using an advanced proprietary matching algorithm which is reliable, precise, and has the fastest matching speed. **Timeshield™** is a standalone fingerprint based time and attendance tracking device, which has no dependency on the Web or a PC.

The attendance data can be easily downloaded to a flash drive or shared over the internet at any time, enabling efficient and effective remote attendance tracking. In addition, because of the fact that human biometric traits such as fingerprints, finger veins, or palm veins are unique, there was no chance of identification error.

Australian Hobie Cat Deployed Standalone Biometric time and attendance system for more than 5000 employees

Benefit

The deployment was a success for “Hobie Cat.” They were getting error free and timely attendance and working hour details from remote locations. It was making their work easier and saving their time. Moreover a central monitoring system was established which established a sense of accountability among employees. M2SYS Technology worked very closely with the organization by not only deploying 2 fingerprint based **Timeshield™** system which they have paid for, but we have also provided them with some basic training on how to use them In order to maximize their ROI on the biometric system.

Here are examples of benefits **Timeshield™** provided:

- Remote employee attendance tracking without any dependency of Web or PC.
- Streamlined time and attendance process and improve accuracy of payroll data.
- Detailed reporting improved exception tracking.
- Attendance Data can now be easily exported to payroll for check processing.

About M2SYS

M2SYS Technology is U.S. based, biometric research and development firm. Since our inception, we have worked closely with our clients with the goal to enable them to capitalize on the benefits of using biometrics for security and identity management by accelerating their return on investment (ROI).

In 2011, M2SYS Technology worked with Hobie Cat in order to streamline their time and attendance system with the help of biometric technology. Currently there are more than 5,000 employees punching in and out with their biometric credentials without any errors or location problems.
