

Finger Vein Biometrics to Track Tardy Students at Wodongan School

Victory Lutheran College was established in 1992 by the Wodonga Lutheran Parish in partnership with parents, to promote individual growth and responsibility. It offers the best possible educational start to their students' future, everything they do as a College is done with their students in mind.

Challenge

The school authority was suffering with late and absenteeism issues. When students come to class late, it can disrupt the flow of a lecture or discussion, distract other students, impede learning, and generally erode class morale. Moreover, if left unchecked, lateness can become chronic and spread throughout the class. They were seeking an affordable solution that could instantly identify the students who came in late. They considered implementing a new procedure for tardy students to scan their finger for attendance.

Solution

In an effort to address the problem of late arriving students, Victory Lutheran College selected **Bio-SnapON™** to work in tandem with their existing student attendance tracking software. They quickly decided to implement **Bio-SnapON™** as it was a complete biometric software system that can be instantly “snapped-on” to any Windows or web based software, without any code-level development. The solution leverages M2SYS' award-winning Hybrid Biometric Platform™ technology, which supports fingerprint, finger vein, palm vein, and iris biometrics.

Finger Vein Biometrics to Track Tardy Students at Wodongan School

One terminal was set up initially with an enrollment capacity of over 1,000 students, and at least 2 non-invasive, contactless **M2-FingerVein™** finger vein scanners were delivered.

Benefit

The school authority can now effortlessly identify all students who come late or who are absent and have access to their information at the push of a button. The technology significantly reduced wait times, streamlined the check-in process, and better managed attendance tracking for their students.

About M2SYS

M2SYS Technology is U.S. based, biometric research and development firm. Since our inception, we have worked closely with our clients with the goal to enable them to capitalize on the benefits of using biometrics for security and identity management by accelerating their return on investment (ROI).

Elizabeth Kloeden, director for the Lutheran Education South Eastern Region, says she had been briefed by the college and was confident it had adopted the technology for the right reasons.
