

Biometric Fingerprint Recognition to Track Attendance in Youth Program

Christ's Church of The Valley (CCOTV) is one of the largest churches in the Phoenix Valley. Their purpose is to win people to Christ, train believers into disciples, and send disciples to reach out to the world.

Challenges:

Christ's Church of The Valley previously utilized a management application that identified users by searching their phone numbers. This method often elongated the authentication process and was prone to error. Hence, CCOTV investigated a solution that would provide faster check-in, tighter security, and reliable member identification that could be quickly deployed.

Solution:

After reviewing several vendors and references from other large churches, Christ's Church of The Valley selected M2SYS Technology's Bio-Plugin™ Appserver fingerprint recognition system to integrate into its existing application .NET membership management software.

Benefit:

By using Bio-Plugin™ Appserver, Christ's Church of The Valley is now able to realize a faster check-in time, creating efficiencies and improving its member experience. The solution also facilitates the secure and trusted identification of youth members, easing the minds of guardians.

"M2SYS Technology's Bio-Plugin™ Appserver diminished all barriers for proper identification and enabled us to verify users accurately and allowed us to provide a secure environment for the youths and their loved ones".
