Military Base Management System

A fully integrated Military Base Management Solution that uses biometric identification to limit unauthorized access in the military base.

Key Benefits

Limited Unauthorized Entry/Exit

The system ensures careful consideration of privacy and safety concerns. Since the solution can be accessed via mobile devices, military police could do biometric checks and flag suspicious persons from anywhere inside the military base.

Centralized Database

All types of related information is stored in a centralized location, which can be accessed from field or anywhere using any computer or mobile device. Documents can be accessed and updated in real time which leads to faster and efficient handling of the case.

Enables Faster Deployments

The solution can be customized on the fly, saving hundreds of development hours, accelerating deployments, and eliminating never-ending development cycles to meet agencies' crucial needs.

Ensures Seamless Integration

Military Base Management is an end-to-end solution that users can integrate seamlessly with third-party systems, including biometric capture tools and biometric matching services for suspect identification.

Highly Customizable

The system is built using M2SYS's eGov platform - a no-code solution for creating customizable apps that integrators can maintain, modify, integrate, and deploy using fewer resources.

How Military Base Management System works

The M2SYS Military Base Management solution secures entry and exit into the military base area with the help of biometric registration and identification. Since the solution can be accessed from mobile devices, military police can perform biometric checks and flag suspicious individuals from anywhere within the military base. This solution can also securely manage access to important files and equipment, improve inventory management accuracy, and reduce shortages and lost inventory.

Features of Military Base Management System

- 
Asset Management | Asset management allows tracking of all equipment in the armory or all equipment used in the military base.
- 
Visitor Management | Allows tracking of visitors inside the military base to register and track each guest entering the facility.
- 
Scalable Biometric Matching | Include face, fingerprint, and iris biometric which allow diverse and in-depth verification to improve data integrity and safety.
- 
Soldier Rationing Management | Soldier rationing management ensures tracking of the rations that are provided to the soldier.
- 
Customizable Workflows | Leverage our robust workflow engine to create customized process automation.
- 
Analytics & Reporting | Build highly detailed reports and custom analytics dashboards for real-time insights.

eGov Solutions

The M2SYS eGov platform offers a variety of customizable e-government solutions that can be seamlessly integrated by system integrators, biometric device manufacturers, and ABIS providers. Some popular solutions are:

Why you should choose M2SYS

M2SYS is a globally recognized digital transformation and citizen identification technology firm. Our eGov platform innovation enables us and our partners to rapidly deliver customized web and mobile apps at a very affordable price point.

Founded in 2002;
