Pension Management System

A comprehensive pension management solution to completely streamline processes, automate pension disbursement, and reduce risk.

A tailor made pension management solution to completely meet your needs and vision while streamlining benefit distribution processes.

Fraudulent activities, duplicate data, and manual processes lead to inefficient pension fund management and disbursement. Moreover, it can cause eligible retirees to lose out on their pensions due to fraudsters as well as generate social welfare overpayments. As a prominent leader of e-governance projects in public service and social welfare distribution programs, M2SYS strives to help governments manage their employees' pension funds smoothly.

M2SYS eGov Pension Management Solution is a highly scalable enterprise solution for government and private pension plans, sponsors, union trusts, third-party administrators and financial institutions. It includes robust workflows and digitization for meeting the needs of pensions funds, members and employers for public sector pension schemes. It can also be seamlessly integrated with third-party systems for streamlining administrative processes and biometric solutions for identity verification - making it ideal for faster and easier deployments.

Key Benefits

Our Pension Management Solution's automated processes and workflows not only reduce human error, it enables you to better manage risk with biometric identity verification. It also provides you the peace of mind that you're fully compliant, as it adapts to legislative and business requirements to provide a truly end-to-end solution. As processes are streamlined, operational performance increases, in turn improving customer satisfaction. The solution can also be customized on the fly, saving hundreds of development hours, accelerating deployments timeline, and eliminating neverending development cycles to meet agencies' crucial needs.

Prevents Fraud

The solution has a built-in profiling module to keep track of pensioners' demographic details, including scalable, multi-modal biometric matching (e.g., fingerprint, face & iris) – eliminating the chance of any kind of pension disbursement fraud.

Requires Less Investment

The software is powered by M2SYS's eGov platform – a no-code environment for creating customizable solutions that don't require any skilled developer to build & maintain solutions that are easily modifiable and highly scalable.

Establishes Transparency

The solution digitizes pension management by eliminating paper-based forms and spreadsheets. It also automates processes, reduces technical errors, and keeps detailed audit logs to ensure pension money is distributed to the eligible people perfectly.

Enables Faster Deployments

The solution can be customized on the fly, saving hundreds of development hours, accelerating deployments, and eliminating neverending development cycles to meet agencies' crucial needs.
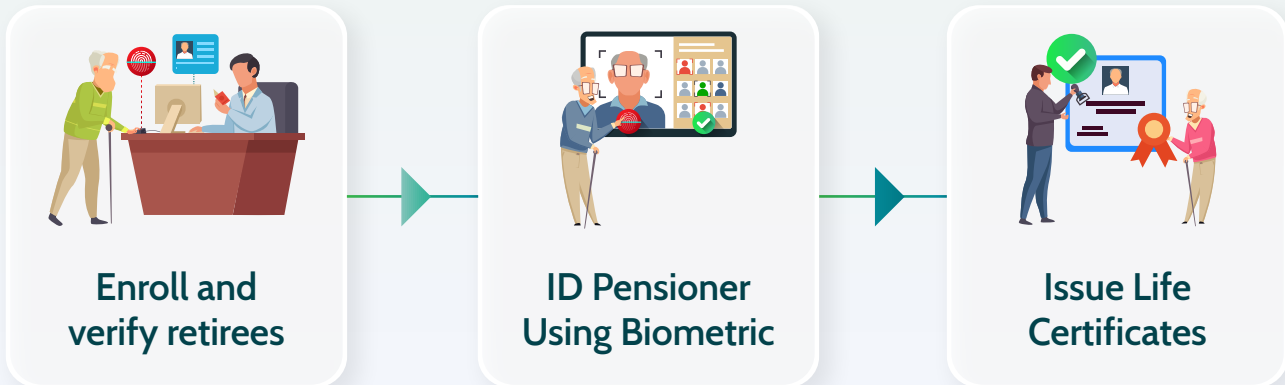

Ensures Seamless Integration

Pension Management System is an end-to-end solution that users can integrate seamlessly with third-party systems, including biometric capture tools, biometric matching services, and existing data management systems for pensioners' identification.

How Pension Management System works

Enroll and verify retirees

ID Pensioner Using Biometric

Issue Life Certificates

The eGov Pension Management System adds new retirees eligible for pension benefits along with their biometric, demographic, beneficiary and any other required information. The system automatically checks for duplicates using the biometric data. Whenever registered pensioners come to the centers to draw their pensions, the system authenticates them using their biometric data and issues Life Certificates as proof of existence and authorizes pension disbursement. All of the steps are automatically logged for future audit and improved transparency.

Features of Pension Management System

Digital Pension Management
Manage pension scheme data, audit log, and benefit disbursement using one solution.

Holistic Profiling
Create and manage detailed demographic profiles of pensioners for robust analytics and reporting.

Customizable Workflows
Create customized workflow for process automations to meet specific organizational needs.

Centralized Database
Keeps all the pension scheme information and pensioners data in a central database for instant access.

1:N Biometric Identification
Option to add any multimodal biometric identity management system for pensioner and beneficiary identification.

Analytics & Reporting
Build detailed reports and custom analytics dashboards for real-time insights.

eGov Solutions

The M2SYS eGov platform offers a variety of customizable e-government solutions that can be seamlessly integrated by system integrators, biometric device manufacturers, and ABIS providers. Some popular solutions are:

M2SYS eGov Platform

- Public Education Solutions
- Military/Defense Solutions
- City/Municipality Digitization
- Government Administration Solutions
- Law Enforcement Solutions
- Citizen Service Solutions

Why you should choose M2SYS

M2SYS is a globally recognized digital transformation and citizen identification technology firm. Our eGov platform innovation enables us and our partners to rapidly deliver customized web and mobile apps at a very affordable price point.

- Founded in 2002; Woman & Minority-Owned
- US Offices: Silicon Valley & Atlanta
- Research & development focused
- Thousands of clients globally
- Digital transformation expert
- Global team
